## 7.6.5. MetPath™ ISDN BRI Service

Integrated Services Digital Network Basic Rate Interface (ISDN BRI) is a service that provides an integrated voice/data communications capability for the transmission of circuit switched voice and data signals. ISDN services use two 64 Kbps "B" channels to transmit any combination of Circuit Switched Voice and/or Circuit Switched Data. The "D" channel is used for signaling.

In the former BellSouth Area the Flat Rate Threshold Pricing plan allows up to 320 hours of use each month per Digital Line. Minutes of use rates will apply for all usage above the 320 hours per Digital Line threshold. The Basic Local Calling area for Usage Option Plan A will be the LATA boundary. Local usage under Usage Option Plan A will be recorded on originating calls terminating within the LATA. Minutes of use rates will apply for all local usage. This plan is limited to outward only service. Usage Option Plan B will have unlimited usage inside the Extended Local Calling Area.
